

Muscan

A static site generator for displaying and sharing your music library.

Synopsis

```
muscan [OPTIONS] __directory__
```

Name

Muscan - a command line application that creates a simple HTML page from your music library's metadata.

Description

Muscan scans each input directory for audio and image files.

Each audio file is scanned for metadata which is then used to generate an HTML webpage.

The data Muscan looks for are: artist name, album title, release date, date added, and album artwork.

Muscan tries to select the best image file within a folder to use as album artwork if no artwork metadata is found.

For instance, image files named “cover.jpg” will be preferred over files named “back.jpg” .

Options

The options are as follows:

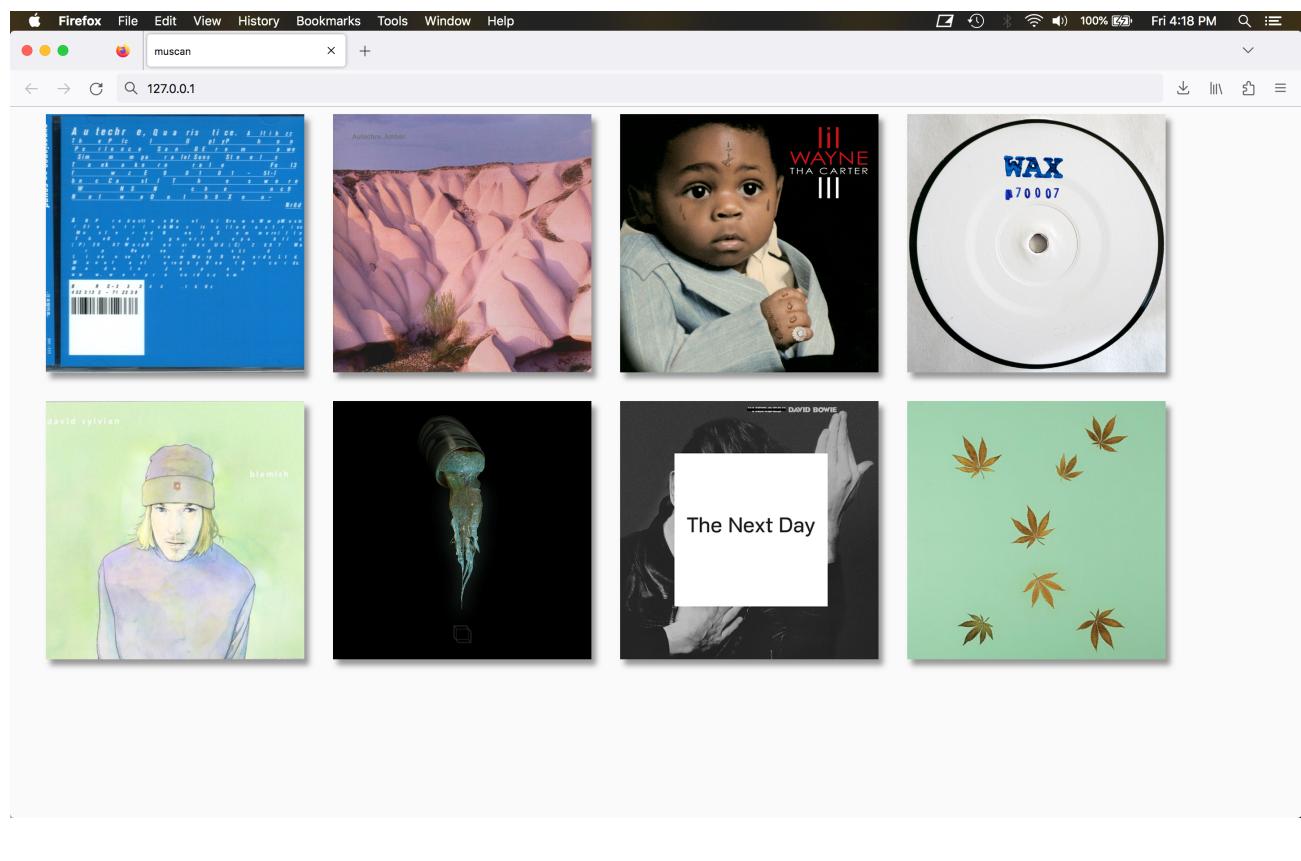

- d Sort by date added.
- y Sort by release date.
- a Sorty by artist name.
- t Sorty by album title.

Examples

Input:

muscan ~/Music/MyMusicLibrary

Resulting webpage:

@Ranch, 2022
